

# Streamline & Automate Data Remediation Your Way

## Data Remediation That Works For You

Automate data remediation for sensitive, critical, and high-risk data. BigID enables you to manage data remediation activity across all of your data risks and vulnerabilities, including data deletion, encryption, tokenization, masking, and more.

Get context-based, intelligent data recommendations and guidance to eliminate the guesswork around remediation - so that you can pinpoint, carry out, and remediate your data risks all in one place.

**Remediate your data your way - centralize management through BigID or decentralize workflows across the right tools and people - across all your data, everywhere.**

- Aggregate, prioritize, and manage data remediation at enterprise scale.
- Create policies to trigger data remediation workflows across specific types of data.
- Get intelligent remediation recommendations based on the context of the data.
- Remediate data in various ways - delete, encrypt, move, mask, revoke, and more.
- Keep an audit trail of all of your remediation activity for compliance.

### Accelerate Data Risk Management

Speed up data risk management by centralizing and streamlining end-to-end data remediation workflows.

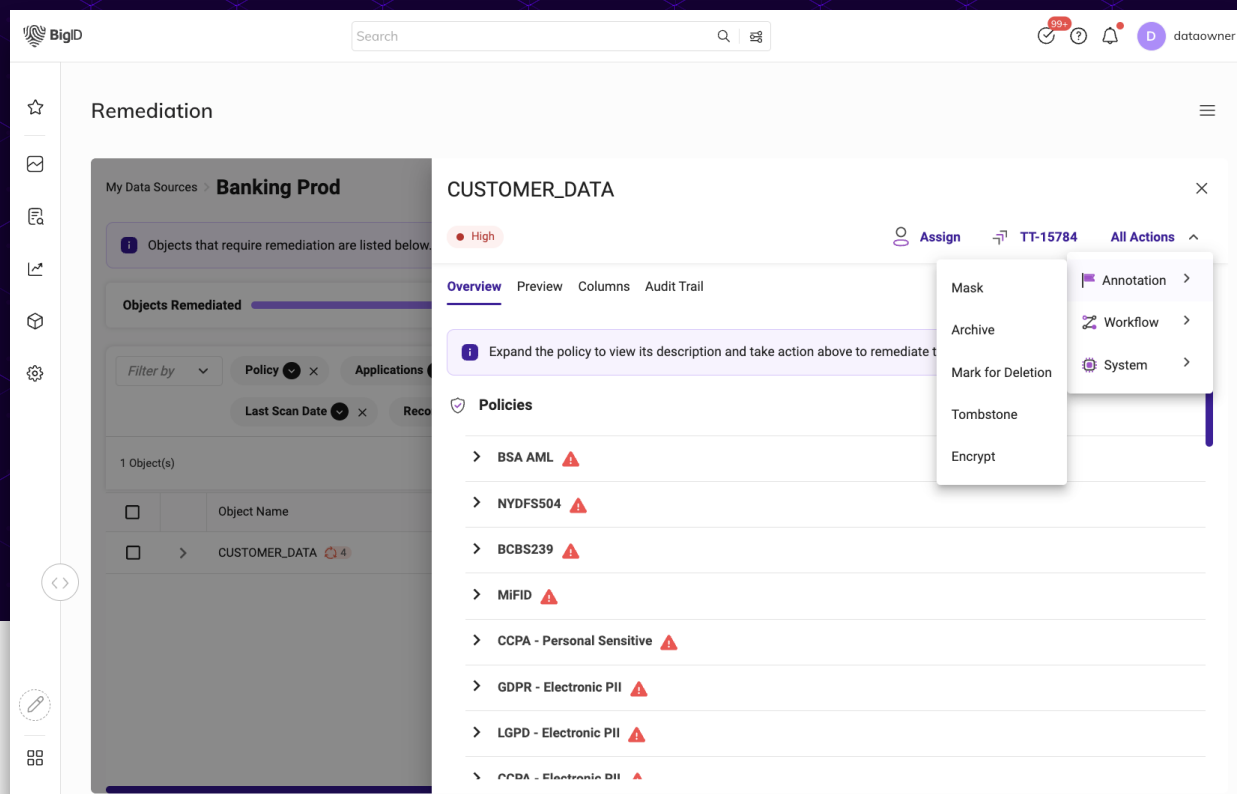

### Elevate Data Security Posture

Kick-off and carry out data remediation actions to proactively elevate and maintain your DSPM.

### Improve Decision-Making

Improve data remediation decisions with intelligence, and context-based guidance to avoid disruption.

## Centralize & Streamline Data Risk Management

Centralize and aggregate all of your data security risks and vulnerabilities through a single pane of glass. Prioritize, investigate, and automatically kick off data remediation workflows in one streamlined process across the appropriate stakeholders and tools.

## Customize Remediation Policies & Rules

Create and define your own data remediation policies according to your organization and its data - including its sensitivity, location, accessibility, and more. Trigger alerts when policies are violated and subsequently kick off the appropriate remediation actions according to business or regulatory requirements.

## Get Remediation Recommendations & Guidance

Automatically get immediate, informed guidance when addressing critical data risks. Leverage in-app recommendations on the most optimal course of action based on the context of the data, including sensitivity, location, accessibility, and more - as well as past actions on similar data. Mitigate the chance of human error and get your security teams going in the right direction.

## Make API Calls Across Your Security Stack

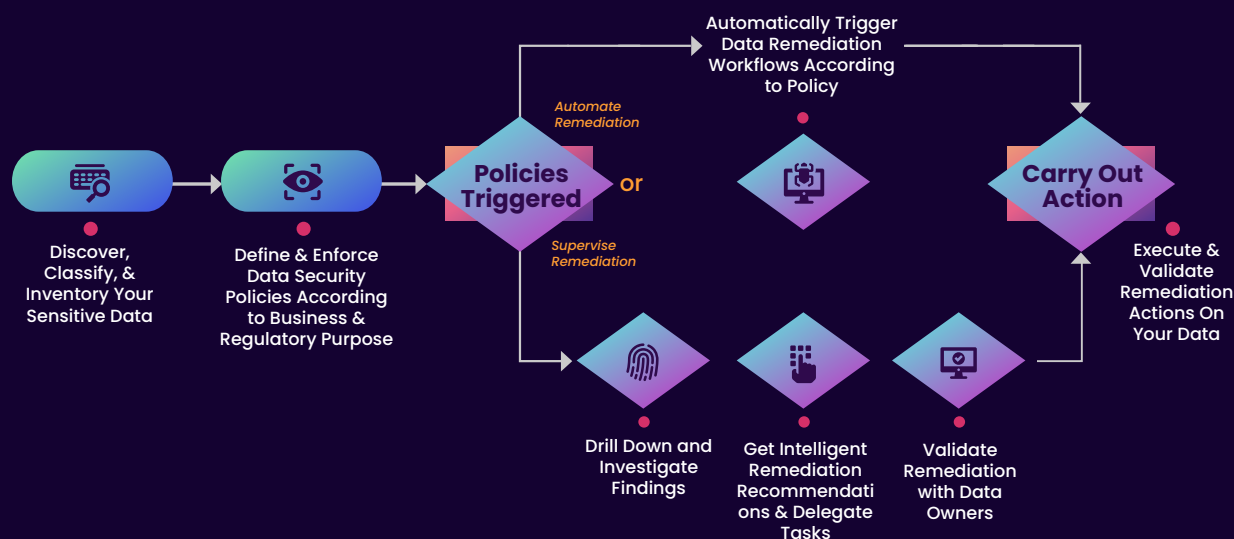

BigID's API-first approach and open ecosystem facilitate seamless integration and enrichment with existing tools across the security stack. Kick-off and manage data remediation workflows and actions, such as encryption, masking, and tokenization, across the appropriate data security tools of choice. Make your existing security tech work harmoniously together with BigID.

## Report & Audit Your Remediation Activity

Generate reports for all data remediation activity carried out across the environment. Create and maintain an audit trail of all activity for business, legal, and regulatory compliance purposes. Validate remediation activities across the environment, at scale.

## How It Works

### Data Remediation

Data Visibility & Control  
Security • Compliance • Privacy • Governance
