Data Retention App

BigID's data intelligence platform enables organizations to know their enterprise data and take action for privacy, protection, and perspective. By applying advanced machine learning and deep data insight, BigID transforms data discovery and data intelligence to address data privacy, security, and governance challenges across all types of data, at petabyte-scale, on-prem and in the cloud.

BigID's Data Retention App enables organizations to enact policy-driven retention management for all data, everywhere - in one place. Leverage data retention policies and business rules, define custom policies, and apply them consistently across all data types and all data sources. Detect data retention violations - and integrate directly with BigID's Remediation App and APIs.

▸ Manage retention policies, findings, violations and notify users of changes in one interface

▸ Apply retention policies consistently across structured and unstructured data

▸ Personalized workflows to cater the needs of policy creators, data owners and auditors

▸ Define custom data retention policies to manage what data to keep, how long, and what to delete

▸ Report, review & remediate data in violation

▸ Combine legal and business policy-driven management for data retention in a single interface

Policy-driven Data Retention Management

Manage data retention across all your data: apply policies, automate workflows, and manage policy violations

BigID App Framework

Automate Action With Apps for Data Privacy, Protection, and Perspective

Data Privacy Apps

▸ PI/PII Inventory
▸ DSAR Fulfillment Automation
▸ Data Processing & Sharing
